Home Security Surveillance

Challenge

Owner of a 3BHK duplex flat, area of approx 2,000 sq.ft. (Built-up) located in South Mumbai, needed to have her living room, guest room on the lower level and the kids room on the higher lever monitored without anyone noticing that there are cameras in these rooms respectively. The main purpose was to monitor the maid servant taking care of her 5year old child when the 2 parents are away.

Solution

Livedarshan's fix speaker camera.

Advantages

The speaker look like camera was designed in a way that it looks like a speaker and inside of it a FIX CAMERA to monitor the rooms. It took 3 such cameras to monitor each of these rooms.

This was the perfect solution to camouflage a hidden camera from the point of a lay man that there is a speaker and not a camera viewing him or her.

The Cameras could also be viewed remotely, in the absence of the owner and recorded directly onto her computer.

This would reduce the worry of the owners as to what's happening at home in their absence. Even without being at home they would view what's happening or happened by simply accessing the cameras through internet.
